Sierra
Radiant Heat Gas Logs

Enjoy the Warm and Friendly Feeling of a Glowing Fire

With Sierra Radiant Heat Gas Logs

What could be more enjoyable than sharing a warm glowing fire with good friends, family, or that special person.

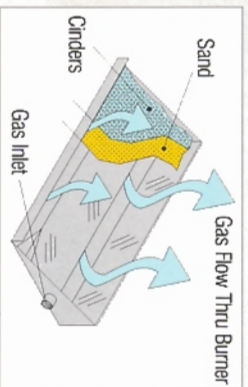

Natural Look

Enjoy the natural and realistic look of a wood fire provided by Sierra Gas Logs without the hassles of a wood fire. Each log is carefully hand-crafted from actual oak and pine logs.

Sierra Logs are produced using high temperature ceramic aggregates for maximum durability. Each log is then hand-painted with five different colors to generate a classic seasoned log look.

Patented Technology

Sierra's innovative burner system creates a perfect fire effect. Controlling the flame from a slow burn to a blazing fire is simple as turning a knob. Remote control and wall switch versions are also available.

Sierra Oak

Mountain Pine

Custom Oak

The advanced Bi-Flo burner system takes the flames to new heights. It disperses the flames upwards around the logs and forward for a more realistic flame pattern and glowing ember bed.

Environmentally Friendly

Sierra's patented Bi-Flo Burner operates more efficiently, burns cleaner with lower emissions, and consumes less energy.

Sierra logs use clean burning natural gas or liquid propane without harming the environment.

Sierra logs are CSA or RADCO approved, assuring that each unit complies with appropriate air emission standards and safety requirements.

Eliminates The Need For Wood

Sierra Gas Logs completely eliminate the hassles of a wood fire. There is no wood to cut, carry, or clean up after.

Gas Technology
You Can

Cost Effective

Natural Gas or Liquid Propane is a readily available energy source, and costs less than electricity, and can be as low as pennies per hour of use.
